Natural Stone Maintenance Instructions

Congratulations on your HydroShield purchase!

HydroShield is the future of surface protection. By choosing HydroShield to protect your natural stone, you have ensured long lasting beauty, durability, and peace of mind.

Maintenance and Cleaning of Natural Stone

Floors; Please keep dry for 24 hours after the HydroShield treatment. Regular maintenance is important to keep the sealed stone looking good. Although the stone is protected from staining, the stone can still scratch and etch. The surface should be swept or vacuumed regularly to keep free of abrasive grit and dirt which can wear and scratch the surface. Spills should be mopped up immediately to reduce absorption. Acidic substances (wine, orange juice, soda, tooth paste) may etch surfaces if allowed to sit on calcium based stone (such as limestone, marble, and travertine) and should be mopped with a mild, neutral pH cleaner as soon as possible.

Showers; Please do not use shower for 48 hours after the HydroShield treatment. Use a squeegee or wipe down after each use. Clean with a neutral pH stone cleaner (HydroShield Neutral pH Stone Cleaner Concentrate or Clean & Renew is recommended) and a soft bristle brush or microfiber towel at least once every two weeks to gently remove any build up. Do not use white scrub pad.

Many cleaners, bath & grooming products contain acids. Please do not use acidic products on or near natural stone as they may etch the stone and permanently damage the surface. Also please do not use products containing bleach or ammonia.

Using any product that contains acids, vinegar, ammonia, or bleach on your HydroShield treated natural stone will void your HydroShield True Service Warranty. Please read all product labels carefully!
