

Natural Stone, Porous Granite, Marble, and Quartzite Countertop Maintenance Instructions

Congratulations on your HydroShield purchase!

By choosing HydroShield to protect your countertops you have ensured long lasting beauty, durability and peace of mind. Please keep dry for 24 hours after the HydroShield treatment.

Countertops treated with HydroShield are much easier to clean and do not require harsh cleaning solutions. HydroShield protects the natural beauty, clarity and luster of your countertops while still allowing the stone to breath while helping to keep the bacteria out.

Cleaning of HydroShield treated Natural Stone Countertops; Using a clean dish cloth or microfiber towel and diluted mild dish soap or Neutral pH Stone Cleaner, simply wipe the surface clean then dry with a clean dish or microfiber towel.

Occasionally contaminants may build up requiring a light cleaning with a white non scratch pad.

To remove something sticky or wax; Allow to cool first then gently scrape off with a **new** razor blade.

Cleaners that are safe for Natural Stone Countertops include;

Neutral pH Stone Cleaner

Simple Green

Mild dish soap

Do not use acidic cleaners (including vinegar) on your countertops. Acids can etch natural stone and are not necessary for cleaning natural stone. Do not use products containing ammonia or bleach. The use of harsh cleaners will void your HydroShield True Service Warranty.
